

How to Install Neuron on Your Mac

A friendly, step-by-step visual guide for Apple Silicon MacBooks (M1, M2, M3, M4)

Step 1: Download the Mac Installer

Open your web browser (Safari or Google Chrome) and click or go to the official GitHub download page:

Official Download Link:

<https://github.com/robmcarlson006/neuron/releases/latest>

Direct File Download (Apple Silicon M1/M2/M3/M4):

<https://github.com/robmcarlson006/neuron/releases/latest/download/Neuron-3.3.0-arm64.dmg>

- Under the **Assets** section, click on **Neuron-3.3.0-arm64.dmg**.
- The file will download directly into your **Downloads** folder.

Step 2: Drag Neuron to Applications

1. Open your **Downloads** folder and double-click the **Neuron-3.3.0-arm64.dmg** file you just downloaded.
2. A window will pop up showing the **Neuron app icon** and an arrow pointing to the **Applications folder**.
3. Click and drag the **Neuron icon** into the **Applications folder** icon.

Step 3: Why Does Mac Say "Move to Trash" or "Cancel"?

When you try to open Neuron from your Applications folder for the first time, your Mac might display a popup message like:

■ ■ Typical macOS Security Message:

"Neuron is an app downloaded from the Internet. Are you sure you want to open it?"

or

"macOS cannot verify that this app is free from malware. Click Cancel or Move to Trash."

Don't worry — this is completely normal! Apple puts this security check on all new software that was built independently rather than downloaded from the official Mac App Store. **Neuron is 100% safe.**

Step 4: The 30-Second Fix using Terminal (Recommended)

To tell your Mac that Neuron is trusted and safe to run, we run one simple command in the built-in Mac **Terminal** app. Here is exactly how to do it:

1. Open Terminal:

- On your keyboard, press **Command (⌘)** and the **Spacebar** at the same time. This opens the Spotlight search bar.
- Type the word: **Terminal**
- Press the **Return / Enter** key on your keyboard. A small black or white window will open.

2. Copy and Paste this exact command:

```
xattr -cr /Applications/Neuron.app
```

3. Press the Return / Enter key:

- Press **Enter** on your keyboard.
- *Note:* Terminal will not print any success message — it simply goes back to a new line. **This means it succeeded!**
- You can now close the Terminal window.

Alternative Method: Enable via Mac System Settings

If you prefer not to use Terminal, you can also allow Neuron directly through your Mac's settings:

1. Click the **Apple menu ()** in the top-left corner of your screen and choose **System Settings**.
2. In the left sidebar, click **Privacy & Security**.
3. Scroll down to the **Security** section.
4. You will see a message: *"Neuron was blocked from use because it is not from an identified developer."*
5. Click the **Open Anyway** button next to it.
6. Enter your Mac password (or Touch ID) when prompted, and click **Open**.

Step 5: Launch and Enjoy Neuron!

■ You're All Set!

- Open your **Applications** folder (or press **Command + Space** and type **Neuron**).
- Click on **Neuron** to open it.
- Create your subjects, generate cognitive science flashcards with AI, and master your studies!

Future automatic updates will download and install seamlessly inside the app.
